

# Technical Data Sheet

## Type 2/918

2/2-way solenoid valve  
 NC - Valve normally closed (as standard)  
 NO - Valve normally open (as option)

Direct operated coaxial valve. No differential pressure is necessary for operation. When energized, the valve seat is opened directly. In standard (NC) the valve closes with spring power.

■ Solenoid valve for gaseous and liquid media

### TECHNICAL SPECIFICATIONS

Type of control	Direct operated, no differential pressure necessary
Design	Coaxial-valve
Connection	Threaded G3/8 - G2 DIN ISO 228/1 (BSP) <small>Further connections like NPT on request</small>
Installation	Preferable with actuator upright
Pressure	0 - 100 bar (see table on page 2)
Medium	Clean, neutral, gaseous and liquid media
max .viscosity	ca. 1500 mm²/s
Temperature range	Medium: -10 °C up to +100 °C Ambient: -10 °C up to +50 °C
Body material	Brass 2.0401 Stainless steel 1.4305
Metallic inner parts	Brass and Stainless steel
Sealing	FKM and PTFE
Supply voltage	AC~ 230V DC= 24V <small>Other supply voltages on request</small>
Voltage tolerance	-10% / +10%
Power consumption	see table on page 2
Protection class	IP65 acc. to DIN 60529
Duty factor	100% ED-VDE 0580
Connection type	Plug

### VALVE FEATURES

- No pressure difference required
- High life time
- Simple compact valve design
- Reliable and sturdy sealing elements
- Long-term availability of spare parts

### FUNCTION

NC – non energized closed

NO – non-energized open

## INFORMATION

- It is imperative to observe the installation and safety instructions in our operating and service manuals.
- For information on our GSR ordering code, please refer to our catalogs. If you have any questions, we will be glad to assist you.
- Required ordering information: valve type, function NC/NO, pressure range, connection, nominal width, medium, flow rate, medium and ambient temperatures, connection voltage.
- **Detailed production-specific drawings and other technical information will be made available when an order is placed**

## PLEASE NOTE

Each individual application decides which valve type is required, the main factor being the resistance of the materials to the operating medium. The correct selection of materials requires knowledge of the concentration, temperature and degree of contamination of the medium. Other criteria include the operating pressure and max. volumetric flow, since , in addition to high temperatures , high pressures and high flow rates must also be taken into account when selecting the materials.

**All materials used for our valves, be it housing, seals or magnets, will be carefully selected in view of the different application areas. Any information given is non-binding and serves for orientation only. No claims under warranty can be derived therefrom.**
